**Fasteners Through the Chord Areas**

**Fasteners Through the Web Areas**

**General Notes:**

1. Fastener spacing and end distance is 3/4" (19mm) minimum, except as shown.

2. Refer to approved truss drawings for required fastener type and quantities for each fastener contact area.

3. Fastener contact areas that coincide with other contact areas may use a common fastener for both areas. This will result in a reduction in the total number of fasteners required at the pitch break joint.

4. Lengths "L" are equal.

5.  = Fastener contact area.
